Dear Sir/Madam,

Subject: Earnings Presentation for the quarter and half year ended 30th, September 2025

We write to inform you that, the Unaudited Financial Results of the Company for the quarter and half year ended 30th September, 2025 has been approved by the Board of Directors in their meeting held on 14th November 2025. Pursuant to Regulation 30 of SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed herewith the Earnings presentation for the quarter and half year ended 30th September, 2025. Further, a copy of the said presentation is also being uploaded on the Company's website at www.jgchem.com.

Kindly take the same on record.

Thanking You,

Yours faithfully,

For J.G.Chemicals Limited

Earnings Presentation

Q2/H1 - FY26

India's Largest Zinc Recycling Company

- JG Chemicals Limited (JGCL), incorporated in 1975, is the largest manufacturer of Zinc Oxide in India.
- The company started off with a small plant in Kolkata in 1975 with a capacity of about 600 MTPA, and has today scaled up to become amongst the top 5 manufacturers globally and the largest in Asia*, with a capacity of 70,000 MTPA of Zinc chemicals.
- From an initial customer base of about 10, today JGCL serves the requirements of over 200 domestic customers and over 50 global customers in more than 10 countries.
- JGC is the largest zinc recycling company and has strong R&D and in-house developed re-cycling technology for various forms of zinc waste / scrap.
- Catering to a wide spectrum of industrial applications with a high degree of customization, including Rubber and Tyre, Ceramics, Paints & Coatings, Pharmaceuticals & Cosmetics, Electronics & Batteries, Agrochemicals & Fertilizers, Specialty chemicals, Lubricants, Oil & Gas and also Animal feeds.
- It is one of the largest suppliers to the top tyre companies and other blue-chip companies in various industries.
- JGCL's subsidiary, BDJ Oxides' Naidupeta plant is the only IATF approved ZnO facility globally and also has WHO GMP certification (amongst the very few plants globally to have this); further it has also the licenses to manufacture ZnO in with IP/BP/USP/ Ph.Eu Standards.

Revenue Segmentation

*Others includes ceramics, paints & coatings, electronics & batteries, lubricants, oil & gas and animal feed end-user industries

Geographical Presence

200+

Domestic customers

90%+

Repeat customers

50+

Global customers from more than 10 countries

- **Direct customer relations** – Over 95% of sales are directly to end customers, helps build strong relations.
- **Long term associations** – Strong and built over several decades.
- **Leading Market position** - Fueled by consistent product delivery, established infrastructure and strategic location of manufacturing facility.
- **Competitive Advantage** - Product pricing, economies of scale, ability to process scrap material and preferred buyer status.
- **Preferred Supplier** – Due to focus on building long term relationships.

Manufacturing plants

West Bengal

Plant 1: Jangalpur

Capacity:

14,400 MTPA for Zinc Oxide

5,040 MTPA for Recycled Zinc Ingots

Plant 2: Belur

Capacity:

1,800 MTPA for Zinc Oxide

Naidupeta,
Andhra Pradesh

The only IATF approved ZnO facility globally and also has WHO GMP certification (amongst the very few plants globally to have this).

Capacity:

43,704 MTPA for Zinc Oxide

2,016 MTPA for Recycled Zinc Ingots

10,080 MTPA for Zinc Sulphate and other allied chemicals

Dahej Project: Update

A new state-of-the art project in Dahej Gujarat for zinc chemicals using the most advanced recycling technologies

Land Acquired: 11.43 acres

Product: Wide range of zinc chemicals (zinc oxides, zinc sulphates and other high performance zinc chemicals) using advanced in- house recycling technologies

Capacity: Over 40,000 MTPA

Commissioning Timeline: Starting H1-FY27

Investment: INR 100 crores

Funding: 100% via internal accruals

Potential Revenue: INR 900 crores.

Strategic Rationale:

- Strengthening presence in Western India and be closer to large consumer segments like ceramics, speciality chemicals, pharmaceuticals and tyres. This project will help increase the contribution of non rubber revenues from the current 15% to 30% over the next few years
- Tap into the agriculture demand in Western India
- Drive margin expansion via non-rubber segments
- We are happy to inform you that work with respect to the new facility at Dahej is moving as per plan.

Environmentally Friendly Manufacturing Process

Environmentally Friendly Manufacturing Process

Using recycled metal instead of finite virgin ores

JGCL is the largest zinc recycling company in India. Our business exemplifies circular economy success by efficiently utilizing scrap materials through recycling. This reduces CO2 emissions, air pollution (by 80%), water pollution (by 76%), and water use (by 40%) for every unit of ZnO produced, by opting for recycled metal over finite virgin ores.

Focus on 'Green Manufacturing'

- Using the maximum amount of Zinc Scrap across all our manufacturing processes.
- ZnO produced from Zinc Dross, Ash & Scrap reduces the consumption of raw material inputs (Zinc metal) to manufacturing by returning recycled Zinc to the value chain.
- Zinc ash is converted into Zinc Sulphate using a ZLD technology; Zinc Sulphate is used in agriculture
- New EPR regulations bode well for JGCL since it is already using recycled RM; hence possibly no risk of reduction of zinc oxide in end user applications.

Certifications:

ISO 9001: 2015, ISO 14001: 2015, ISO 45001: 2018, IATF 16949: 2016, Ecovadis ESG assessment Silver Rating, World Health Organization GMP certification, IP / USP / BP / European Pharmacopoeia licenses, Sustainable ZED Silver Certification.

Use of recycled/ secondary zinc instead of primary Zinc

Impact of 'Zinc mix' in manufacturing of ZnO:

Reduction in energy consumption & CO2 footprint

Leading Market Position With Diversified Customer Base

ZnO is a highly versatile chemical, it is used in various industries with 80+ grades sold for a wide spectrum of industrial applications requiring high customization to manufacture from zinc scrap making it a complex manufacturing process having high entry barriers

Used to produce vulcanized rubber, for manufacturing of **tyres**, which improves elasticity, resilience and weather resistance;

Used in **ointments** and wound healing products as it has antiseptic and skin protecting properties.

Enables alkaline **batteries** to have a higher energy density, meaning they can store more energy in a given volume, resulting in longer-lasting batteries.

Used to produce zinc bromide used in **oil** well drilling fluids

Used as an additive in **lubricants**

Used in **Ceramics** to reduce the melting temperature, while improving the intensity and elasticity of color glazes.

Used in plant protection products, **fertilizers** without any toxicity risk, boosting yield and growth of food crops

Used as a **pigment**, helps in UV & stain blocking & corrosion inhibition

Used as a trace element in **livestock**

- Zinc Oxide is an inorganic compound having use in various end-use industries.
- Zinc Oxide is not a plain vanilla product where one size fits all.
- Within each user segment, each customer has different specifications and hence a customized product.

Strong focus on the rubber industry for JGCL has enabled it to gather scale and large institutional customers which offer very strong visibility in volumes and earnings; focus on increasing non rubber customers going ahead.

Revenue Segmentation of Zinc Oxide Industry

JGCL has a lot of scope to gain market share in non-rubber applications by substituting imports for pharmaceutical industry and also catering to the premiumization of the Indian market with newer applications across several end user industries.

Key Strengths

High Entry Barriers in the Industry

Long drawn process for Customer Approvals

On an average it takes about 4 to 5 years minimum to get approval with large Tyre accounts primarily because they are looking for established vendors with large size, production facilities and consistent quality systems. They prefer sourcing from the same vendors rather than adding new vendors. Tire manufacturers are under OEM scrutiny and resist new suppliers to establish consistent quality. Hence, for a new entrant, it virtually becomes impossible to set up a large scale facility with systems and wait for five years approximately for approvals.

Strong Sourcing Network of Zinc Scrap

The procurement of zinc scrap, which is recycled by us, is particularly challenging due to the limited availability from major steel companies domestically. Material needs to be sourced from across the globe as no single supplier / country can meet the entire demand. To establish this network of suppliers throughout the globe which is a time taking process and involves decades of establishing business, confidence and personal relationships, which is a very difficult task for a new entrant.

Stringent Regulatory Approvals

Various licenses like IATF, WHO GMP and others like the US Pharma, British Pharma, European Pharma & Indian Pharmacopeia are very difficult to secure as they require stringent manufacturing systems and also capital expenditure to ensure the plant meets the necessary norms. Some of these are necessary to cater to various customers in the pharmaceutical, cosmetics, nutraceuticals and specialty chemical segments.

Zinc Scrap comes in different size, shapes and quality

Zinc Dross/Scrap is a highly complex metal to process and handle while ensuring highest efficiencies

Future Growth Strategies

Q2/H1-FY26 Financial Performance

Financial Highlights

Q2-FY26 FINANCIAL HIGHLIGHTS

Revenue From Operations INR 2,203 Mn	EBITDA INR 219 Mn	EBITDA Margin 9.94%
PAT INR 150 Mn	PAT Margin 6.81%	Basic/Diluted EPS INR 3.67/share

H1-FY26 FINANCIAL HIGHLIGHTS

Revenue From Operations INR 4,383 Mn	EBITDA INR 451 Mn	EBITDA Margin 10.29%
PAT INR 314 Mn	PAT Margin 7.16%	Basic/Diluted EPS INR 7.70/share

H1-FY26 Operational Highlights

- Q2 was characterized by a slight dip in the EBITDA margins (YoY), due to the effect of higher cost inventory which was consumed in the current quarter driven by shipping delays. Currently we are witnessing a revival across most industries and also an increase in prices of zinc which augurs well for the Company.
- With the GST cuts in September-25, the automobile industry has witnessed a spurt in the demand which augurs well for the tyre industry as well. Most tyre companies are also expanding their production. All this should help in increased demand for zinc oxide.
- Company is working on developing some specialized products to cater to customer specific demand. This augurs well for the long term as the customer attractiveness to work with JGC will be more due to tailor made solutions.
- India is witnessing a gradual addition of home-grown brands in various sectors e.g. healthcare and cosmetics. These opens up new opportunities for Zinc Oxide.
- Work with respect to the new facility at Dahej is moving as per plan.
- Work is moving well on the Recycled Rubber Project. The pilot trials for the advanced “ recycled rubber product” is expected to begin in Q4 FY 26. This is in line with the Company’s objective to “increase the content per tyre”.
- Spare capacity is available in the Naidupeta plant to meet customer demand for the upcoming fiscal till the Gujarat Project is commissioned; the Company will explore brownfield expansion in Naidupeta as required to augment capacity and increase efficiencies.
- The company is in advanced stages of installing solar power generation in its Naidupeta facility. We intend to meet over 60% of our electricity requirements through renewable sources in the next 5 years.
